

BW DIGITAL - GENERATIVE AI AND LLM POLICY

1. Purpose

The purpose of this Policy is to ensure that all AI tools are used responsibly, lawfully and in a way that enhances productivity, accuracy and innovation while protecting BW Digital's data, people and reputation. It provides guidance on approved tools, acceptable use, governance responsibilities and training expectations.

2. Scope

This Policy applies to all employees, contractors and consultants who use, or plan to use, AI tools in connection with BW Digital's business. It covers both company-issued and personal devices used for work, and applies globally across all BW Digital offices and projects.

3. Definitions

- **Generative AI / LLMs** - Software systems that create or summarise content (text, code, data, images, audio or video) in response to user prompts (e.g., Microsoft 365 Copilot, OpenAI ChatGPT, Google Gemini).
- **Approved Platform** - A system assessed and endorsed by BW Digital's IT team for specific business uses.
- **Sensitive Data** - Information classified as confidential or restricted, including trade secrets, business financials, project details, customer or employee personal data, and credentials.

4. Guiding Principles

The following principles underpin all AI use within BW Digital:

- **Responsible Use** - AI tools must be used in accordance with BW Digital's values and all relevant laws and policies.
- **Human Oversight** - Employees are accountable for the accuracy, legality and tone of any AI-generated material.
- **Transparency** - Use enterprise platforms with logging and monitoring so that AI activity is traceable and auditable.
- **Privacy by Design** - Protect privacy by anonymising or redacting data before using AI tools.
- **Continuous Learning** - Share insights and lessons learned to improve collective understanding and safe adoption.
- **Ethical Use & Fairness** - Apply AI tools in ways that promote fairness, inclusivity and non-discrimination. Users must actively mitigate bias, verify that outputs do not disadvantage individuals or groups, and ensure transparency in how AI-assisted results are generated and used.

5. Approved Platforms and Endorsement Process

Using approved AI tools protects the organisation from data loss and ensures that the benefits of AI can be realised safely and efficiently.

5.1 Pre-approved Platforms

- **Microsoft 365 Copilot** - approved for productivity, summarisation and collaboration within BW Digital's Microsoft environment.
- **OpenAI ChatGPT Plus** - approved for drafting, translation and ideation, subject to data-handling controls.
- **Robin AI** - approved for contract review, clause comparison and drafting support in the Legal team.
- **OpenAI ChatGPT Enterprise** - under evaluation for potential Group-wide deployment.

5.2 Process for New Tool Endorsement

- Employees seeking to use a new AI tool must submit a request to the IT Service Desk (it-servicedesk@bw-digital.com), describing the intended purpose and data types involved.
- The IT Service Desk, with input from the legal team and applicable team management, will jointly review the request for compliance, data protection, cost and integration requirements.
- A pilot may be approved for testing before formal adoption.

5.3 Review Cycle

- All Approved Platforms are reviewed quarterly for usage, risk and effectiveness.
- If a tool no longer meets BW Digital or BW Group standards, it may be suspended or withdrawn.

6. Roles and Responsibilities

AI governance is shared across BW Digital. Every user has a role in ensuring safe and compliant adoption of AI tools.

- Peter Missingham - Oversees implementation, ensures adequate resources and promotes responsible innovation.
- The BWD IT Team - Maintain technical controls, security standards and vendor oversight.
- Randi Adiguna - Reviews contracts, intellectual property and compliance with applicable laws.
- Monita Singh / HR team - Arrange for staff training, monitor usage and capture lessons learned.

- All Staff - Follow this Policy, verify all AI outputs, safeguard data and report any concerns or incidents immediately.

7. Data Classification and Handling

AI tools must not be used to process or store data classified as confidential or restricted unless approved safeguards are in place (e.g., you are using Copilot within BW Digital's Microsoft 365 environment). Examples of sensitive data include unreleased financials, project pricing or customer information. In particular:

- Classify information before sharing or prompting.
- Remove or anonymise personal data whenever possible.
- Never enter passwords, private keys or security credentials into AI platforms.
- Delete temporary or test data used to generate AI-content.
- When using AI tools that store or process information across jurisdictions, ensure compliance with regional privacy laws. These include NZ Privacy Act 2020, Australia's Privacy Act 1988, Singapore PDPA and Indonesia PDP Law.

8. Usage Guidelines

These examples illustrate how AI can be used appropriately across BW Digital.

8.1 Permitted Use

- Drafting and refining emails, proposals, presentations or reports.
- Summarising internal meeting notes or public-domain documents.
- Translating general text between languages (eg English and Bahasa Indonesia).
- Brainstorming and idea generation for problem-solving or process design.

8.2 Prohibited or Restricted Uses

- Entering confidential or restricted data into non-approved tools.
- Generating or sharing offensive, misleading or discriminatory content.
- Allowing AI to make legally binding or personnel decisions without review.
- Distributing AI-generated material externally without human validation.

8.3 Operational Controls and Usage Clarity

- When AI-assisted content is shared externally (e.g. marketing materials, reports to partners or clients), label it as AI-assisted or seek managerial approval before release.
- Only current, approved versions of AI tools listed in the Approved Platforms Register may be used for business purposes.

9. Privacy and Security

- Comply with applicable data protection laws and BW Group security policies.
- Only use enterprise accounts with single sign-on (SSO) and monitoring enabled.
- Ensure vendors provide contractual guarantees of data isolation and no model training on BW Digital data.

10. Intellectual Property

AI-generated material may contain or resemble third-party content. To avoid breaches:

- Respect copyright, licensing and IP laws when using or adapting AI-generated material.
- Consult BW Digital legal team before using AI-created outputs in deliverables, marketing or external communications.
- Attribute AI assistance appropriately when required by contract or regulation.

11. Vendor and Model Management

- All new AI vendors undergo security and privacy assessments by the IT Service Desk.
- Material vendor or model changes trigger re-evaluation.
- The BW Digital IT Team will maintain an Approved Platforms register listing permitted tools, versions and use cases.

12. Incident Reporting and Response

- Report suspected data loss, unauthorised access or inappropriate AI use immediately to the IT Service Desk and BW Digital legal team.
- The incident team will investigate, contain and resolve issues promptly, notifying affected stakeholders if necessary.
- All incidents will be reviewed to identify root causes and preventive actions, and outcomes will be documented and shared with relevant stakeholders.

13. Training and Enablement

- All users must complete AI awareness training before using approved tools.
- Refresher training and practical workshops will be offered quarterly.
- BW Digital HR or team management will provide targeted sessions for role-specific AI use.

14. Monitoring and Metrics

- Quarterly reports to the SLT summarise usage, compliance, incidents and productivity outcomes.
- Metrics guide continuous improvement and identify areas needing additional safeguards.

15. Review and Updates

- Policy reviewed annually or when significant changes occur in technology, law or Group policy.
- Updates are approved by the SLT and communicated to all employees.
