2. Introduction

BW Digital is committed to maintaining the highest level of information security and integrity across all its communication and document management practices. In alignment with our Written Information Security Policy (WISP), specifically sections on Data Classification & Handling (DCH) and Cryptographic Protection (CRY), this policy introduces a structured labelling system for SharePoint documents and emails. This system is designed to ensure the secure handling, sharing, and storage of information within and outside the organization.

3. Purpose

The purpose of this policy is to standardize the classification and handling of all documents and emails within BW Digital using a labelling system. This system will facilitate compliance with regulatory requirements, protect sensitive information, and manage data access efficiently.

4. Scope

This policy applies to all employees, contractors, and third-party partners of BW Digital who create, manage, or share documents and emails on the company's SharePoint platform and through email communications.

5. Label Definitions

Public: For all public communications. Applies to documents and emails containing no sensitive information (non-business or destined to the large audience). The label applies a watermark, but no encryption.

External - Everyone: For new unprotected in-confidence communications. Typically includes business information linked to another external entity, i.e. commercial agreements, Master Service Agreements (MSA), pricing details, etc. The label applies a watermark, but no encryption.

External - Encrypted: For protected in-confidence communications. Typically includes commercial agreements, Master Service Agreements (MSA), pricing details, etc. The label applies a watermark and encryption. Only users with a pre-approved email domain (admin controlled) will be able to access the data (emails and documents).

Internal: Default label for internal communications. Applies to all emails and documents not classified as Public, External, or Restricted. Only users with a pre-approved email domain (admin controlled) will be able to access the data (emails and documents). Those users are mainly all BW Digital related domains.

Restricted: Reserved for the senior leadership team. Applies to highly sensitive internal communications and documents that require restricted access. Only users with a pre-approved email (admin controlled) will be able to access the data (emails and documents).

6. Policy Details

6.1. Implementation of Labels

Labels must be applied at the time of document creation or email composition. Internal is the advised label and applied by default, but it can be changed.

The choice of label should reflect the highest level of sensitivity of the information contained within the document or email. If the encryption is lowered to a less restrictive label, a justification is asked from the user, and logged in the MS Compliance admin centre.

6.2. Access and Distribution

Documents and emails labelled as **Public** can be shared freely.

External labelled information should only be shared with authorized external parties.

Internal communications should not be shared outside the organization without proper authorization (bw-digital.com, bw-digital-ext.com, bw-group.com, hawaikicable.co.nz, hawaiki.co.nz).

Restricted documents and emails are strictly limited to the senior leadership team, with access controlled on a need-to-know basis.

6.3. Compliance and Enforcement

All BW Digital employees and partners must comply with this labelling policy. All employees can apply necessary labels to their documents and email.

6.4. Training and Awareness

BW Digital will provide necessary training to all relevant stakeholders to ensure effective implementation of this policy, through Lunch & Learn and personalised support.

6.5. Review and Revision

This policy will be reviewed annually or as needed to reflect changes in regulatory requirements or company procedures.

7. Approval

Ludovic Hutier, CEO, BW Digital
