EXPERIENCE

Software Engineer

Datacom

📅 May 2021 – Dec 2022

📍 Auckland, NZ

EROAD:

- Worked on a **react native** mobile application.
- Was responsible for creating rich and responsive user interfaces.
- Was responsible for **authentication** using **aws** and **redux**.
- Built many complex components such as counter dials and graphs.

UDC:

- Responsible for creating the myUDC portal.
- Worked as a full stack engineer using **Spring Boot**, **Spring Security**, **JPA**, **Thymleaf** and **Bootstrap CSS**.
- Brought to life a responsive UI design purely using vanilla **JS** and **CSS**.

IAG:

- Was a part of the front-end team responsible for building the ASB insurance portal and maintaining portals for other vendors.
- Worked as a senior react developer using **React**, **Typescript**, **Redux**, **OAuth**, **MFEs** and **GraphQL + Apollo server**.
- Built a responsive web application using IAGs internal UI toolkit library called chroma.
- Implemented authentication using **JWTs**, **Redux store** and **cookies**.
- Built and maintained the CI-CD pipeline using **Jenkins** and **AWS**.

Software Engineer

Kiwiplan NZ

📅 November 2019 – May 2021

📍 Auckland, NZ

- Was a part of a 100+ member development wing which was responsible for building and maintaining software solutions for packaging plants around the world.
- Worked as a software engineer in an agile team responsible for the core scheduling components of the software.
- Built a **React** interface for tracking the usage and the cost of items that were required to build a box.
- Designed **REST** end-points using **Spring Boot** and **Hibernate**.
- Fixed legacy bugs in **C** and **FORTTRAN**.

Test Analyst

Tata Consultancy Services

📅 January 2016 – January 2017

📍 Chennai, India

- Responsible for testing software and providing deployment support to Woolworths and Countdown stores across Australia and New Zealand.

EDUCATION

Master of Engineering Studies, Software Engineering (Honours)

University of Auckland

📅 Feb 2018 – July 2019

Key Courses: Machine Learning and Data Mining, Software Development Methodologies, High Performance Computing, Robotics and A.I, Agile and Lean Development, Intelligent Software Agents.

Bachelor of Engineering, Computer Science and Engineering

Anna University

📅 August 2011 – May 2015

Key Courses: Database Management Systems, Data Structures, Design and Analysis of Algorithms, Software Quality Management.

TECHNICAL SKILLS

React Typescript Tailwind CSS Java
C++ rust JavaScript Python Kotlin

Next.js Express Relational DB
MongoDB Linux Bash Serverless
AWS Docker SpringBoot

SOFT SKILLS

Hard-working Collaborative
Quick learner Leadership
Approachable & Friendly
Accountability & Ownership

INTERESTS

- Composing music
- Playing guitar
- Astrophysics
- Tinkering with computers and operating systems
- Video games

- Tested web applications which were being migrated to a different underlying architecture and ensured a smooth transition from IBM to JBOSS.
 - Wrote test cases and test scripts using **Selenium**.
 - Wrote **SQL** queries to test the database and back-end.
-

PROJECTS

Fit Fynd

Full Stack Kotlin + ReactNative

Fit Fynd is an application which finds workout partners for people based on their workout preferences. It uses a springboot back-end built with kotlin and mobile client built using react native. The database of choice is mysql/mariadb.

Task Planner

Next.js Web App

A planner application built using next.js 14, typescript, prisma, next-auth and mongoDB. This application is built using the latest features from next.js such as server actions and app router. Next auth is implemented to provide google sign-in option. The project is hosted on vercel. [Click here to view.](#)

Calorie Tracker

React Web App

A web application built using React and Typescript to track the amount of calories consumed. The app serves as an exercise to create and setup a react project using typescript and built-in react hooks to create a state management system similar to redux.

Code Anomaly Detection

Master's research

Detection of code smells/code anomalies in the Qualitas Corpus dataset using LSHiForest. LSHiForest uses locality sensitive hashing to sort various instances of data into hash buckets to facilitate a similarity search. This is leveraged to detect anomalous instances of data.
