

Baylee Thompson

Full Stack Developer

Wellington, New Zealand • bayleethompson63@gmail.com • (020) 0963 355

Baylee is a JavaScript developer based out of the NZ. While comfortable on the full stack, he leans toward front-end development and currently works heavily with React, React Native, Next, and TypeScript with the aim of rapidly developing stable multi-platform applications. He's worked with a large range of companies of different size and scope and has a passion for real-time data favoring databases like Firebase.

WORK EXPERIENCE

Full Stack Developer

February 2021 – August 2023

Fooyo Pte.Ltd

- Planned, implemented, and maintained high-quality software using the JavaScript/TypeScript stack—React, React Native, and Node.js—to create solutions and improve users' lives.
- Tracked and fixed bugs using Jira as a reporting tool.
- Researched different subjects and reported my findings using diagrams to help the team make the best decisions.
- Worked with functional components and modern hooks and maintained the legacy class component and Redux store.
- Created and maintained Native components to manage low-level features such as Bluetooth connection.
- Contributed to the integration with different APIs using REST and GraphQL.

Full Stack Developer

June 2020 – December 2021

Digital Fusion

- Developed an all-in-one task management system using Vue and Node.js to allow users to create, delegate, and track their tasks, upload files, add comments, log history, etc. That reduced the overall task delegation time in an organization by 40%.
- Designed wireframes using Figma and converted them into Vue components with a mobile-friendly interface to allow users to access the system via multiple devices.
- Designed a database schema for Google Firestore and integrated Firebase authentication to allow only verified users to access the interface.
- Developed an email notification module using SendGrid's REST API to allow users to get instant updates about their tasks, increasing response time by 70%.
- Created a user activity and web traffic management system by integrating Google Tag Manager and Google Analytics. Developed custom events to track various activities on the platform, enabling A/B testing on the site's performance.
- Designed a custom search functionality using Algolia API with auto-complete suggestions, reducing the operational database costs by 33%.
- Developed unit tests using Jest for individual Vue components and integration tests using Cypress to test the functionality's end-to-end flow.

React Developer

October 2017 – April 2020

React Digi Limited

- Developed a booking application using React, Next.js, and Node.js to let users book a service online and get real-time updates on their progress, increasing the customer acquisition and retention rate by 55% in three months.
- Designed the architecture of the front end, back end, and database schema, which I then deployed on different Docker containers to achieve better load balancing, health monitoring, and scalability.

- Integrated Google Tag Manager to track custom events, such as page visits, user registrations, and event bookings, and connected it with Google Ads and Google Analytics to get user engagement insights and perform feature experiments.
- Integrated the platform with Mailgun and Twilio APIs to perform phone verification and send email acknowledgments and marketing newsletters, increasing returning users' rates by 18% following the campaign launch.
- Followed a Kanban-style workflow using Trello boards and communicated with the client constantly while in a different time zone.
- Integrated a system with Stripe Checkout API to accept online booking payments, increasing sales by 25% with custom coupons.

Front End Developer

August 2016 – July 2017

TTC

- Developed projects of all sizes, from small static pages to big enterprise projects.
- Contributed to project architecture when it's needed to meet all client requirements and ensure the best code quality.
- Created an awesome visualization system to present genomes with the D3.js.
- Developed a lot of projects from scratch, based on customer requirements and designs provided from Photoshop or Sketch.
- Built pixel-perfect cross-platform responsive websites on almost every project.

EDUCATION

Victoria University of Wellington

February 2014 – November 2016

Bachelor of Engineering – Computer Science

SKILLS & OTHER

Languages: HTML5, CSS3, SCSS, TypeScript, JavaScript, SQL, Python, GraphQL

Frameworks: Angular, Vue.js, Next.js, ReactNative, Express.js, Django REST Framework, Flask, Redux, Jest, Cypress, Bootstrap, MUI, Tailwind CSS

Libraries: React.js, Node.js, Web3.js, jQuery, Redux Form, Redux-Saga, WebRTC, NgRx, RxJs, Antd, ApexCharts.js

Tools: Git, MongoDB Atlas, Mongoose, SendGrid, Postman, Webpack, Figma, Trello, Jira, AWS AppSync

Platforms: Amazon Web Services (AWS), Firebase, Amazon EC2, Twilio, Google Cloud Platform (GCP), Docker, AWS Lambda, Visual Studio Code (VS Code)

Storage: Cloud Firestore, MongoDB, MySQL, PostgreSQL, MariaDB, Amazon S3

Order: TypeORM, Hooks, Ajax, Apollo, Semantic UI, Microsoft Azure, Linux Administration, Progressive Web Applications (PWA)
