◆ SUMMARY

Full-stack software developer with over 2 years' industrial experience. Specialised in web development with technologies and tools in the NodeJS ecosystem including JS/TS, React, Vite, NextJS, TailwindCSS. Experienced in Git-based version control, automated CI/CD on major cloud platforms such as GCP/Firebase, AWS Amplify, Azure App Service. Practised to SCRUM project management.

I always conceive a true admiration to my colleagues' hard work, professionalism and teamwork spirit and try to be such a person myself. I'm looking for an environment that values procedure and quality so everyone clearly knows their role, their responsibility and can stick together as one strand to grow as a team. I'd like to fill an intermediate software developer position that gives me space to hone my skills towards a software specialist that has a sharper mind on web methodologies, tooling and even architecting, project management to deliver technologically advanced, user-friendly, reliable software products and make real value to the team and the society.

◆ RELATED EXPERIENCE

Trade-In 🔗

A web service for One NZ to help customers follow an intuitive and smooth journey to make the most value of their old phone for a new one. Highlight of this project is that we exercised a design token based styling method to seamlessly align to the One NZ Design System and use the latest tools (TailwindCSS) to make the building blocks highly reusable and adaptable.

One Pin 🔗

A single-page web app that helps users to raise issues to One NZ so network weakness can be perceived and optimised. It also serves as a window for the users to look up in a map to know exactly when, where and how One NZ is making changes to get people more connected. We adopted a containerised solution with Docker, K8S, Helm and GKE to make the app super reliable and available. Having the resources defined as code enabled us to have easier control over the resources and free us from any a particular cloud provider.

One Good Kiwi 🔗

A multi-page web app that allows One NZ users to donate to their favourite charities without using their own money.

Mitre 10 Marketplace

A multi-role multi-entry web-based software package to help NZ's leading home improvement retailer - Mitre 10 to create a service partner system and bring convenient home improving services to the users. This project is a typical data management application, which involves role-based access control, data caching, data synchronisation, monorepo, and other advanced data management mechanisms and code structuring. We used a series of industry-examined tools such as TS, eslint, prettier, react-query, zod, etc. to bugs, errors can be largely surfaced before and in build time, therefore quality and reliability can be held.

◆ SKILLS

Software Development

- Architecting and web development on the cloud. Experienced in using Google Firebase, AWS Amplify to develop full-stack web apps. Participate serving web apps on Azure. I'm an AWS Certified Cloud Practitioner.
- Experienced in Node stack web development. Proficient with Node, ReactJS, NextJS, TailwindCSS and associated tools and frameworks in the ecosystem. Had a few side-projects working with Vue, NuxtJS and tools in the cluster.

- Strong skills in Agile project management and self-management.

Languages

- Mandarin Chinese, first language
- Fluent English
- Fluent Japanese

◆EDUCATION

Master of Information Technology

University of Auckland, New Zealand

Mar. 2020 - current

Certificate of Outstanding Achievement, Semester One, 2020

Cumulative GPA: 7.33

Bachelor of Laws. Majoring Cyber Crimes Investigation

Public Security University of China, China

Sep. 2006 - Jul. 2010
