

Candidate Profile of John Du for the role of Full Stack Developer

John is an Auckland based Full Stack Developer with just over three years of commercial experience, holding both a Bachelor's and Master's degree in Computer and Information Sciences from AUT. He is a professional and intelligent candidate who presented well at interview. He communicated with confidence, expressed his ideas clearly, and demonstrated a mature understanding of modern software engineering practices.

He brings hands-on experience across the full software development lifecycle — from gathering requirements and running proof-of-concept work, through to development within agile teams, delivery of solutions, and ongoing technical support. His background includes developing, testing, and implementing both software and web-based solutions, with particular strength across the service layer and in functional programming for new product development.

John is currently working within a modern backend environment and is actively contributing to a major technology uplift. His technical responsibilities include:

- Leading the migration of a backend stack from JAX-RS to Spring Boot
- Using Spring Boot as the controller layer and integration point for the wider system
- Designing and implementing core CRUD RESTful API architecture
- Architecting and integrating additional Spring Boot modules as part of an ongoing modernization programme

Overall, John demonstrates strong technical capability, a proactive approach to engineering challenges, and the communication skills to operate effectively within a collaborative development team

Salary expectations: \$100k per annum

Availability: 4 weeks notice

John Du

Professional Summary

Full stack software engineer with 3+ years of commercial experience in the full process of software and web development including creating, developing, testing and implementing solutions as well as release, deployment and troubleshooting activities. My experience includes functional programming including using JavaScript and React for software development as well as working within agile teams and contexts. I am a collaborative person who enjoys working with others and effectively utilises my interpersonal skills to understand the needs and requirements of stakeholders and to deliver solutions that exceeds customer expectations. My innovative, solution-oriented nature enables me to deliver software solutions with a focus on customer and user experience. I am a quick learner able to rapidly understand new systems and software, processes and structures.

Technical Skills

Java | TypeScript/JavaScript | React | Next.js | HTML/CSS | Git | Flutter | GWT | JAX-RS | Outlook Add-ins | SQL and NoSQL | Material-UI | Restful API | AWS | Agile Development | Linux | Jira

Education & Certification

Auckland University of Technology Master of Computer and Information Science with First Class Honours	2021 - 2022
Auckland University of Technology Bachelor of Computer and Information Sciences	2017 - 2020
AWS Certified Developer - Associate - 2024	2021

Professional History

Full Stack Software Developer Rubbish Direct Limited https://rubbishdirect.co.nz/	Sep 2022 – Present Auckland
--	--------------------------------

Duties:

- Designed, developed, and maintained enterprise software to optimise business operations, including frontend applications by using **React, TypeScript, Next.js, Flutter, and GWT**, and **RESTful APIs** using **Java and PostgreSQL**.

- Integrated internal systems with third-party software (e.g., **MYOB, Microsoft Graph API**) to build unified systems and enable comprehensive reporting.
- Automated business operation, improved workflow transparency for the operation teams, and provided centralized reporting for the management team.
- Refactored legacy systems into modern frameworks, improving maintainability, scalability, and performance.
- Collaborate closely with stakeholders to gather requirements, analyse workflows, and design systems to solve the business problem.
- Worked in an agile team using **Jira**, planned the project development lifecycle to ensure efficient system design and development processes.
- Conducted code reviews, maintained comprehensive project documentation, and promoted software engineering best practices.
- Identified and resolved performance bottlenecks through testing and user feedback analysis, significantly improving system stability.
- Mentored junior developers and provided technical guidance for the complex projects.

Achievements:

- Automated key operational workflows that were previously managed manually, supporting teams to focus on higher-value work rather than administrative overhead.
- Delivered the HR system with automated payroll module, reduced the processing time by 80%, and eliminated manual data entry errors.
- Successfully delivered the workshop management system, resulting in a 30% increase in the overall truck utilization.
- Built systems to manage work and property to provide the teams with better tools for scheduling, analysis, and resource management.
- Enhanced applications to use data analytics-based solutions to improve operational decision-making and visibility across departments.

Mobile Developer & Research Assistant
Auckland University of Technology (AUT)
<https://www.aut.ac.nz/>

Nov 2021 – Feb 2022
Auckland

Duties:

- Developed a system for bariatric surgery follow-up to assist the academic research team using **Flutter** and **Firestore Cloud Services**.
- Collaborated with project owners to design a system that supports research activities and the collection of data for experimental purposes.
- Provided integrated solutions to all the modules and developed integration specifications.
- Created and maintained documentation related to the application and coding.

Achievements:

- The system was successfully developed and delivered for use by the research team which enabled them to communicate with and support patients and to effectively conduct their research.

Web Developer (Internship)

Nov 2020 – Jan 2021

Bow Length Limited

Auckland

<http://www.bowlength.nz/>

Duties:

- Developed frontend application using HTML, CSS and jQuery.
- Participated in functional process design, and specific functionalities development.
- Executing project launch, testing for various project versions and implementing updates.

Achievements:

- Contributed to the development and delivery of multiple client-facing projects.
- Developed my software development skills and effectively contributed in a team environment towards a number of software development projects.
