

SHARMANE CLAIRE AUSTRIA

Position:	Full Stack Developer
Remuneration:	\$80k-\$85k
Availability:	Immediately available
Working Rights:	3 years working valid visa. Intention to move to resident's visa

Candidate Summary:

Sharmane Claire Austria is a highly relevant and well-rounded full stack developer with strong alignment to BW Digital's requirements. She brings 5+ years of professional experience, exceeding the 2–3-year requirement, and has operated at both senior developer and team lead level, demonstrating capability in end-to-end solution delivery across enterprise environments.

Technically, Claire is a very strong match across both frontend and backend requirements. She has solid experience in Java, React, TypeScript, Angular, and .NET/C#, alongside building REST APIs and microservices architectures, which aligns closely with BW Digital's need for scalable application development (including Java-based backend capability). Her exposure to both Java and .NET stacks provides flexibility across different backend environments

She also demonstrates strong cloud and DevOps capability, including hands-on experience with AWS (Lambda, API Gateway), CI/CD via Azure DevOps, and serverless architectures, which align well with the role's desirable DevOps and deployment experience. Additionally, her work designing ETL flows and managing data integration supports the role's requirement around data processing and tooling.

From an enterprise and security perspective, Claire stands out with direct experience in identity and access management (SAP Customer Data Cloud), MFA implementation, and GDPR-aligned data handling, indicating strong awareness of secure development practices, which is highly relevant to BW Digital's ISMS and ISO 27001 expectations.

Overall, Claire is an excellent match for the role, combining strong full stack technical capability, cloud and DevOps experience, enterprise-scale delivery, and security awareness. She would likely operate comfortably at a mid-to-senior level, with immediate ability to contribute to both delivery and broader engineering improvements at BW Digital.

YOUR RECRUITMENT SPECIALIST

Consultant Name: Eloise Gantuangco
Title: Technology & Transformation Manager
Robert Walters
E: eloise.gantuango@robertwalters.co.nz
M: 021 1457433

SUMMARY

Software engineer with end-to-end experience, from turning business needs into technical solutions to testing and deployment. Skilled in building scalable systems with a focus on clean and maintainable code. Proficient in Java, Python, .NET/C#, React, and TypeScript, with experience across both SQL and NoSQL databases. Adept at implementing CI/CD pipelines using Azure DevOps and deploying cloud-native solutions on AWS. Utilises AI-assisted tools such as GitHub Copilot responsibly to improve development efficiency without compromising code quality. Passionate about continuous learning and always eager to expand my technical toolkit.

EDUCATION

2012 – 2015
De La Salle-College of St. Benilde, Manila, Philippines
Bachelor of Science in Information Systems

TECHNICAL SKILLS

- Technical Skills: Java/ Python / Node.js / React / Angular / TypeScript / JavaScript / .NET Core / C# / SQL Server / MySQL / PostgreSQL / No SQL database / APIs / Microservices
- Cloud & DevOps: AWS (Lambda, API Gateway, S3, CloudWatch, IAM) / SAP CDC / Azure DevOps
- Tools & Methodologies: Git / Bitbucket / Jira / Agile / Kanban

CAREER HISTORY

DEC 2025 – PRESENT
STUDIO YARI, AUCKLAND, NEW ZEALAND
Business Owner & Operator

- Operate a small e-commerce business selling handmade products through Shopify and local markets.
- Manage product creation, inventory tracking, order fulfillment, and customer communications.
- Maintain the Shopify-based e-commerce website, including content updates, product listings, and user experience improvements.
- Leverage AI-assisted tools to streamline content creation, business operations, and website management.

MAY 2023 – JUL 2025
CAMBRIDGE UNIVERSITY PRESS & ASSESSMENT, MAKATI, PHILIPPINES
Integration Team Lead

- Led a cross-functional integration/development team delivering secure, scalable solutions across multiple platforms. Oversaw codebase ownership, conducted detailed code reviews, and drove end-to-end development processes from design through deployment, working with the Product Owner and Delivery Manager.
- Developed enhancements to My Cambridge, a React-based web app used as a central login page and role managing for users of different Cambridge platforms.
- Designed and maintained a serverless microservice for data processing using AWS Lambda and API Gateway.
- Managed SAP Customer Data Cloud in a SaaS context - integrated with other Cambridge platforms to handle identity access management, ensuring data security and compliance with GDPR. Developed APIs and ETL flows for real-time data synchronization.
- Spearheaded the development of the Cambridge Login 2 project – enhancing multi-platform login with MFA integration.

OCT 2019 – APR 2023
FUJITSU, TAGUIG, PHILIPPINES
Application Systems Engineer

- Developed microservices to manage doctor and patient information for a healthcare web app.
- Created a proof of concept for an employee time-in web application for internal use.
- Facilitated coding bootcamps for junior developers transitioning to Java projects.
- As a team lead, I defined technical requirements, led scrum processes, and ensured code optimization and maintainability.

MAR 2016 – OCT 2019
INDRA PHILIPPINES INC., ORTIGAS, PHILIPPINES
Software Engineer

- Developed new features of the payment module in the customer management system of Meralco - a major utilities company in the Philippines.
- Developed payment-related microservices integrating with other systems.
- Developed batch jobs to process thousands of daily third-party payments.
