

YAOCHEN YAN

Position: Full Stack Developer

Remuneration: \$80k - \$85k

Availability: 4 weeks

Working Rights: Yes

Candidate Summary:

Yaochen Yan is a solid early-career full stack developer with 2+ years of experience, aligning well with BW Digital's requirement for 2–3 years in full-stack development. He has demonstrated capability delivering end-to-end SaaS applications, contributing across frontend, backend, and cloud environments, and has experience working in Agile delivery settings.

Technically, Yaochen is a strong match to the core stack requirements, particularly through his experience with Java/Spring Boot (desirable for the role), JavaScript/TypeScript frameworks (React, Angular, Next.js), and REST API development, which aligns closely with BW Digital's full stack expectations. His backend exposure across multiple languages (C#, Java, Python) and frameworks demonstrates versatility and ability to work across different technology stacks.

He also brings relevant cloud and DevOps exposure, including AWS services, Docker, and CI/CD pipelines (GitHub Actions), which aligns well with the role's desirable DevOps and deployment requirements. Additionally, his experience building scalable applications for real users (1,000+ accounts) and contributing to production releases indicates practical, hands-on delivery capability.

Yaochen's experience with AI-integrated applications and data pipelines further adds value given BW Digital's focus on digital infrastructure and emerging technologies. While he may have less depth in enterprise-scale systems and secure development frameworks compared to more senior candidates, he shows strong foundational skills, adaptability, and modern development practices.

Overall, Yaochen is a well-aligned and technically relevant candidate for this role, particularly strong in modern full stack technologies including Java/Spring Boot and cloud-native development. He would suit a **junior-to-mid level position**, with potential to grow into the role, though may require support in enterprise architecture, security standards (e.g., ISO 27001), and large-scale system optimisation.

YOUR RECRUITMENT SPECIALIST

Consultant Name: Eloise Gantuangco
Title: Technology & Transformation Manager
Robert Walters
E: eloise.gantuangco@robertwalters.co.nz
M: 021 1457433

SUMMARY

Full-Stack Software Engineer with 2+ years of experience building production SaaS applications. Proven track record delivering end-to-end features across mobile, backend, and cloud infrastructure, with experience integrating AI-driven capabilities into real-world products.

EDUCATION

Jul 2019 – Nov 2022

University of Auckland

Bachelor of Science

- Computer Science

Mar 2023 – Jul 2024

University of Melbourne

Master of Information Technology (AI Specialisation)

- Relevant courses: Statistical Machine Learning, AI Planning for Autonomy, Computer Vision, Distributed Systems

TECHNICAL SKILLS

- Languages: C++, Java, Python, JavaScript, TypeScript, SQL, HTML/CSS
- Frontend: React, React Native, Angular, Next.js
- Backend: Flask, C#, .NET, Spring Boot, REST APIs, Node.js,
- Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, GitHub Actions, CI/CD
- Databases: MySQL, MongoDB
- Tools & Methods: Git, Agile/Scrum, JUnit, Jest, Linux

CAREER HISTORY

JUL 2024 – PRESENT
WISEFUTURE, AUCKLAND
Full-Stack Developer (Remote)

- Built and shipped multiple full-stack features across a SaaS platform serving 1,000+ student-family accounts and several schools, covering attendance tracking, messaging, and parent-school communication
- Independently developed key features with React (React Native for Mobile Application), handling UI, state, and Developed backend services using C# and .NET, building and consuming REST APIs for data integration across the platform's core modules, integrated with MySQL and MongoDB for structured and unstructured data needs
- Deployed and managed backend services on AWS (EC2, S3), using Docker to standardise development and deployment environments across the team

OTHER EXPERIENCE

MAR 2024 – JUL 2024
KULAA, MELBOURNE, AUSTRALIA
Program Developer Intern

- Independently built approximately 25% of the production product, delivering full-stack features across frontend, backend (Python/Flask), and end-to-end integration
- Contributed to an AI application pipeline — designing prompts, routing inputs through an LLM API, and postprocessing responses for structured output delivery in a production environment
- Delivered 3 production releases across 4 Agile sprints, participating in code reviews, debugging, and iterative improvements
- Supported a successful product launch that reached 5,000+ registered users

ADDITIONAL INFORMATION

Projects

- Project: RAG Demo Application
 - Duration: 2025
 - Tools: Python, Flask, Groq API (LLaMA 3.1)
 - Built a RAG application integrating LLM APIs (Groq/LLaMA 3.1), implementing document ingestion, vector embeddings, and semantic search to return contextually grounded answers — demonstrating end-to-end data pipeline design and LLM integration into a production-ready application
- Project: CI/CD Pipeline Demo
 - Duration: 2025
 - Tools: Python, Flask, GitHub Actions
 - Built a Flask application with a fully automated CI/CD pipeline using GitHub Actions, including pytest unit tests and flake8 linting on every push. Designed to demonstrate production-ready deployment practices
